

**First LPCB Wireless Approval**

Argus Security wireless detectors recently completed EN54 testing successfully and are the first certificated by LPCB to the EN54-25 wireless standard for fire system applications. Argus Security addressable wireless devices use dedicated interfaces, allowing integration with Argus Vega and other intelligent open protocol systems to provide hybrid application solutions. A special interface enables use with conventional fire alarm installations. Product is distributed in the UK under the Hyfire brand by Sterling Safety Systems and is available in other European markets via specialist system distributors. **Fire legislation off target?**

The Welsh Assembly has passed legislation requiring fire suppression systems in all new housing in Wales. Although aiming to improve domestic fire safety, the new rules for mandatory residential sprinklers are unrealistic and miss an obvious opportunity to save lives at a lower cost with more hard-wired smoke and heat alarms. For the negligible cost of installing 2 or 3 additional hard-wired alarms during construction, our homes could have in-built, comprehensive fire and CO safety.

**Five in one**

Designed to assist heating engineers in the safe installation, commissioning and servicing of boilers and combustion systems, Telegan's Sprint V provides five instruments in one small, handheld unit: a flue gas analyser, a differential thermometer, a differential manometer, a gas escape detector and a carbon monoxide room safety monitor. An important feature is 'Smart Purge' technology which clears potentially acidic gases from the unit.

**Making a splash**

Automist is a new innovative, best value, fire protection solution to facilitate contemporary open plan design and comply with building regulations and the RRF50. The system is available in a unique mixer tap version for higher risk kitchen fire protection and an inconspicuous wall mounting version to protect stairwells or escape routes. It provides design freedom and flexibility for open plan spaces, in new builds, refurbishments or loft conversions. The device has been extensively tested and proven by BRE Global in Watford.

**The safe option**

ADT Fire & Security has upgraded the fire protection system at Cardiff County Hall with its latest MZX Technology to ensure the multi-purpose venue benefits from a robust and reliable digital fire detection system. In addition, Cardiff County Hall took advantage of ADT Fire & Security's recycling scheme to help minimise environmental waste during the upgrade. Since it opened in 1989, the ADT Fire & Security system has safeguarded the County Hall without incident and was chosen to continue to provide protection.

**Installation is easy**

In excess of 1000m of Easyguard permanent free standing handrails were supplied by 'safety at height specialists' SAFETYWORKS & Solutions, to the site of a major manufacturer of earth moving equipment, based in Leicester. The Easyguard system was chosen over other companies as it was able to offer a fast track, easy installation process, and system flexibility due to its simplistic design which does not incorporate counterweight components within the manufacture.
