PROJECT DESCRIPTION

The installation of a fully wireless fire detection and alarm system in the family home of Channel 4's TV presenter, Sarah Beene. The project was undertaken as part of the TV show "Beene's Restoration Nightmare".

REASONING FOR WIRELESS USE

The project required the installation of a category L2 fire system throughout the Grade 1 listed Rise Hall. The system was installed in a very short period of time to allow the newly refurbished hall to be used for a televised wedding event. The sensitive nature of the construction, thickness of the walls and the large amounts of decorative plasterwork made wireless detection and alarm devices the perfect choice.

"With the thickness of the walls and ceilings and distances involved, not to mention the detailed cornice work we didn't want to disturb, the wireless system was the dream solution!"

Sarah Beene, Property Developer & TV Presenter
